

Audio

We have been active in the audio industry for over 50 years and have a long tradition of manufacturing optical data carriers. When we started in 1958, there were vinyl records.

Today, arvato digital services is one of the world's leading replicators, with over 6.7 million data carriers produced per day in our facilities all over the world.

But we not only focus on production. arvato digital services offers a complete package of media services, from [premastering](#), [mastering](#), [replication](#) and [final assembly](#) to [distribution](#). In addition, our product portfolio includes many [digital services](#) and [copy protection solutions](#) as well as [mbargo](#), a technology for protecting intellectual property rights in peer-to-peer file-sharing networks.
