

## Premastering Services

### **Inspection and processing of production masters**

Production masters are master media or master images that have been fully processed in regard to format and content to suit the desired optical data carrier (CD, DVD, SACD, Blu-ray, etc.). The production master content is transferred on a 1:1 basis to the products that are to be produced. Content is usually no longer processed or changed at this point.

Upon request by the customer, content can be corrected or supplemented through our premastering process.
